

# PROJECT DEMO PLANNING

Creating an employee travel approval application for corporate project demo planning involves several key steps:

## **Define Requirements:**

Outline the features, user roles, and functionalities needed (user login, submission forms, approval workflows, etc.).

## **Database Schema:**

Plan the database structure to store employee information, travel requests, approvals, etc.

## **Develop Backend:**

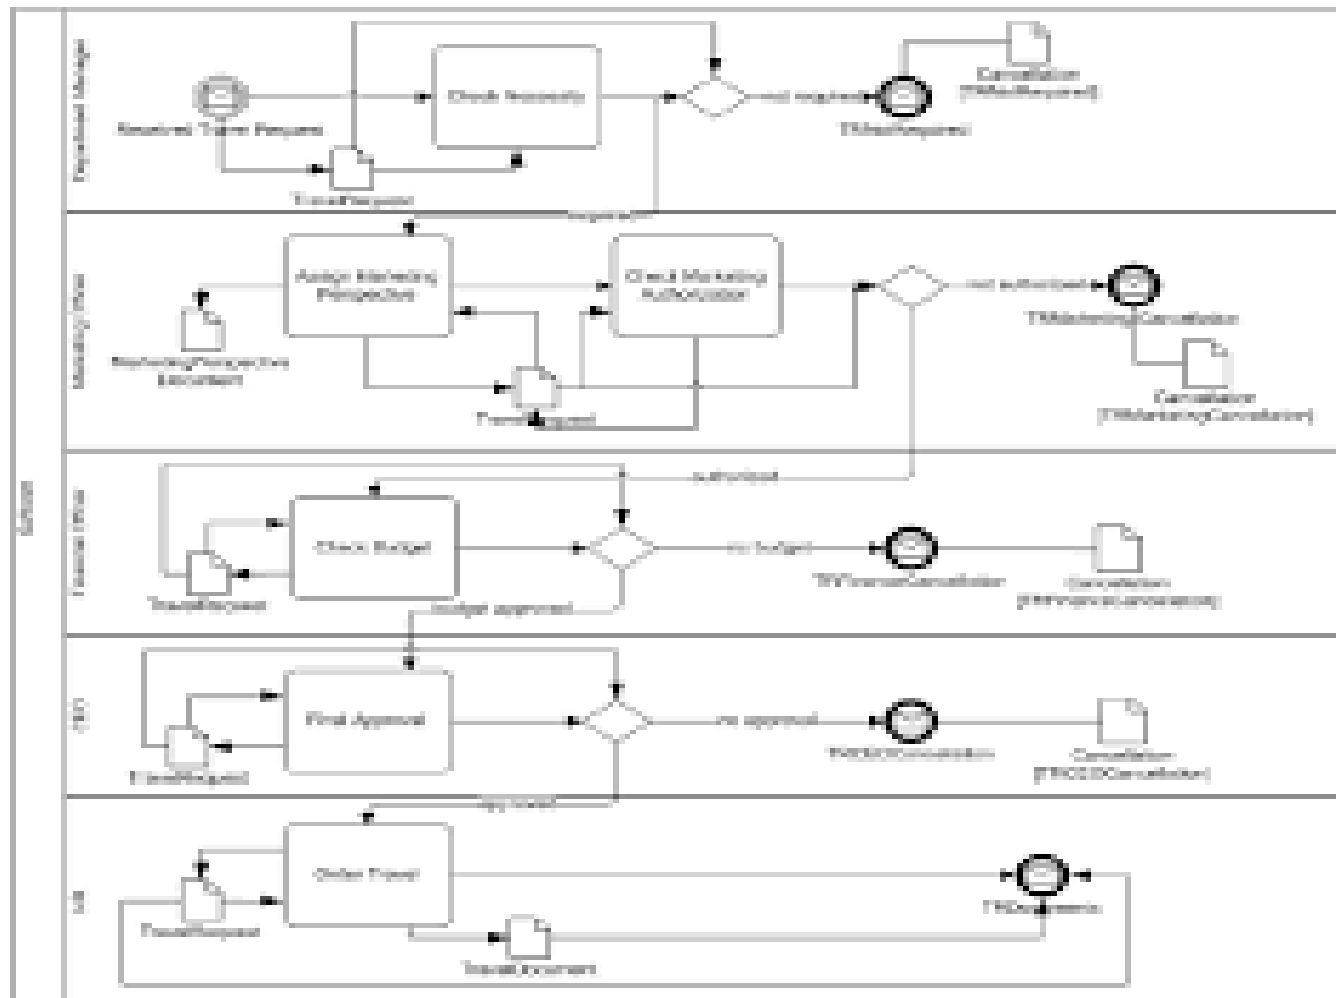

Use a suitable programming language and framework (such as Node.js, Django, or Spring Boot) to create the backend logic, including user authentication, request handling, and database interactions.

## **Build Frontend:**

Develop an intuitive and user-friendly interface for employees to submit travel requests and for managers to review and approve them. Use technologies like HTML, CSS, and JavaScript (with frameworks like React, Angular, or Vue.js). Implement

## **Approval Workflow:**

Set up a workflow system that routes requests from employees to respective managers for approval.
